

# OVERDRIVE 5G

Turf Type Perennial Ryegrass

**O**VERDRIVE 5G perennial ryegrass offers the golf and turf professional the latest in enhanced gray leaf spot resistance and improved overall turf quality. OVERDRIVE 5G is very good performing variety in current NTEP testing.

OVERDRIVE 5G perennial ryegrass has a high endophyte level that enhances turf performance. This endophyte is a naturally occurring fungus. It works together with the developing and mature plant to enhance stress tolerance and improve insect resistance.

The major improvement that OVERDRIVE 5G offers is a new level of gray leaf spot tolerance. This disease plagues establishing and mature perennial ryegrass stands. In late summer during seeding establishment, gray leaf spot can infect turf stands and leave vast expanses with undesirable browning turf. During late summer season heat, established permanent perennial ryegrass lawns may also become infected.

OVERDRIVE 5G is assured to offer the turf professional as well as homeowner the latest developments in improved turf and gray leaf spot resistance.
